A.Sai Sandeep
DevOps Engineer

Contact:+91-8985922141
abotusaisandeep9@gmail.com
Hyderabad, TS 500081.

Professional Summary:

- Having around 4.4+ years of IT Experience, Build & Release and Configuration Management on Unix/Linux and AWS environments.
- Implemented a CICD pipeline involving Jenkins, Dockers and AWS to complete the Automation from commit to Deployment
- Hands-on experience on developing Terraform files and modules to spin up resources on the AWS platform.
- Good Knowledge in bash (Shell), Groovy and exposure to shell scripting.
- Experience with Dockers and Kubernetes for different in Fra structure setups and testing of code.
- Experience in Branching, Merging, Tagging and maintaining versions across the environments using SCMtools like Github and Git.
- Experience in using build automation tools like MAVEN for building deployable artifacts such as WAR, JAR&TAR from source code.
- Have good knowledge in installing, configuring and administering Jenkins Continuous Integration tool on Linux servers along with updating plugins such as SVN, GIT, Maven, and Experience in Implementation of Continuous Integration through Jenkins & Deployment using Ansible.
- Experience working with SonarQubea code quality control tool for continuous inspection.
- Experience with Configuration and Maintenance of Automation tools like Ansible.
- Having good Experience with Ansible for transferring and running the modules with the help of SSH based systems and writing playbooks for server configuration.
- Involved in writing various custom Ansible Play books for deployment orchestration and developed Ansible playbooks to simplify and automate day-to-day server administration task.
- Build Complete Infrastructure using Terraform script and created Terraform scripts and used Terraform templates along with Ansible modules to configure EC2 instances.
- Automated application deployment to web/application servers in cloud using Dockers containerization technology and generating artifacts.
- Dockers containerization, building Dockers images at the root of the repository, configuring the Dockers containers and creating Dockers files for different environment.
- Experience in **Kubernetes** to deploy, scale, load balance and manage **Dockers** containers with multiple names paced versions and in managing Dockers Containers, and **Kubernetes** Clusters.
- Created Clusters using **kubernetes** and worked on creating many **pods,** replica sets, services deployments, labels, health checks using liveness and readiness probe and ingress by writing **yaml** files.
- Experience working with collaboration tools like Jira, Slack.
- Experience installing and administering monitoring tools such as Nagios and monitoring, logging of these systems running on cloud(s) and on premise.
- Designed, configured and managed public / private cloud infrastructures in Amazon WebServices (AWS)
- Hands-on experience in software containerization platforms like Dockers and container orchestration tools like kubernetes.
- Experience in implementing python alongside using various libraries such as mat plotlib for charts and graphs, MySQL db for database connectivity, python-twitter.
- Having experienced in agile Methodologies, Scrum stories and sprints experience in a python base environment, along with data analytics, data wrangling and Excel data extracts.

Technical Skills:

Build Tools	Maven
Version Control Tools	GIT
Infrastructure Provisioning Tool	Terraform
CI &CD Tools	Jenkins
Issue Tracking Tool	JIRA
Artifact Repository managers	Nexus
Container orchestration tool	Dockers, Kubernetes, Kaniko
Orchestration Tool	Kubernetes
Monitoring Tool	Nagios, Cloud Watch
Code coverage Tool	SonarQube
Configuration Mgmt. Tools	Ansible
Scripting	Shell, Groovy, python
Web/Application Servers	Tomcat, Apache, Nginx
Image scan tool	Black duck scan
Cloud Platforms	Amazon web services

Professional Experience:

- Working as a DevOps Engineer in power soft global solutions pvt ltd fromMay2019totilldate.

Work Experience:

Project2: DevOps Engineer
hazmatauthority
Apr2021 to till date

Description: Hazmat transport is subject to the hazardous materials regulations, which are closely aligned across North America countries. However, manufacturers, shippers, and carriers should be aware of some critical differences in regulatory requirements.

Responsibilities

- Build automation/Continuous integration of projects for a client on Jenkins pipeline.
- Installing Red Hat Linux using kick start and applying security policies for hardening the server based on the company's policies.
- Manage Code Repository by maintaining code repository in GIT; improve practices of branching and code merge to custom needs of development team.
- Implemented Jenkins as Continuous Integration Server, for - Installation, Configuration, Design and Administration, and integrating tools with other systems. Installing and administering GIT, Jenkins and Art factory on Servers.
- Worked-hands on to create automated, containerized cloud application platforms (PAAS), and design and implement DevOps processes that use those platforms.
- Designed highly available, cost effective and fault tolerant systems using multiple EC2 instances, Auto Scaling, Elastic Load Balance and AMIs.
- Built Terraform templates to create custom sized VPC, subnets, NAT to ensure successful deployment of Web applications and database templates.
- Created Clusters using Kubernetes and worked on creating many pods, replication controllers,

replicasets, services, deployments, labels, health checks and ingress by writing Yaml files.

- Code Coverage- Install SONAR on Jenkins server and configure with the build process for the code Analysis process for better code quality and code metrics and rapid feedback for development teams and managers.
- Used the JIRA for bug tracking, creating the dashboard for issues.

Project1: DevOps Engineer
Surinam Airways
Jun2019toMar2021

Description: Surinam Airways is the flag carrier of Suriname and, throughout its life, has operated a varying fleet of Boeing, Airbus and DC aircraft. The airline has primarily focused on providing connectivity to local and regional destinations. Still, the carrier has also maintained connectivity with Amsterdam in Europe over the years with its long-haul services.

Responsibilities:

- I belongs to Operations, Security and Infra Team. As a security team personnel
- Where my major role is to remediate critical, very high, high and medium findings which are generated from AWS inspector findings and Guard duty findings.
- And as a Operation team personnel
- I used to get Jira NPESD tickets raised by app/ dev teams for their Jenkins build failures which I used to remediate by observing the Jenkins console output and by observing k8s pods logs As a infra team personnel
- I was supposed to create and provide AWS resources like EC2, RDS, S3, vpc, iam roles access keys.
- Responsible to perform build and deployment activities using Jenkins and ansible.
- Involved in creation of different Dockers images using Dockers file.

Environment:

AWS, Ansible, GIT, Jenkins, JIRA, Maven, SonarQube, EC2instances, Autoscaling, ElasticLoadBalanceand AMIs

Strengths:

Strong problem-solving skills, excellent communication abilities, Proficient in automation, Adaptability to change, Continuous learning mindset

Hobbies:

Exploring distant lands, Capturing moments, Feeling the music
